Ej Sobrepeña

This is a hotel room booking program

The program is made according to Grade 4-5:

Main functions are:

1. Show prices of room types
2. Room reservation
3. Show available rooms
4. Search customer

The program should be able to prevent invalid inputs from crashing the program.

This program contains arrays, struct, random numbers, functions, switches, loops, counters etc.

I made this program in about almost 7 days in total and This program consists of about 800 lines of codes altogether.
